It is generally known that mathematical sciences are of immense importance in the development of intellectual, technical and technological progress of modern society. In the 20-th century the achievements of pure and applied mathematical and mechanical sciences laid a basis for further development of all directions of research activities in every field from physics of microworld to the modeling of processes of a galactic life. Moreover the fundamentals of interdisciplinary approach were formed in the investigation of complex real-world processes.

The aim of this Series is to satisfy the needs of leaders in the development of mathematical and mechanical sciences performing researches both at universities and academic institutions in the following areas:

- Prompt publication of a monograph: the monograph appears in the Internet, as soon as it is ready for publication, prior to its publication in print.
- High publication standards.
- Strictness, constructivism and prompt reviewing.

We are hoping that this Series will prove to be an essential factor in the development of a Unique European Scientific Community at the beginning of the third millennium.

The manuscripts may be submitted to the nearest regional Executive Editor of the Series.
